DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 3-5 are allowed.
2. The following is an examiner's statement of reasons for allowance: The art of record, Nakazawa (US 6274805), Basol (JP 11340482), Takeshi (JP 08125206) and Taiyo (JP 6115763) fail to teach the binding layer and diffusion layer comprising TiN or TaN sandwiching a smoothing layer as required by claim 1. Nakazawa teaches a binding layer between the Mo electrode and the absorbing layer (col. 5, line 60 to col. 6, line 30) but fails to teach a binding or diffusion layer between the electrode and the substrate. Basol teaches the use of a mica substrate and Mo electrode layer ([0017]) but is silent to a binding or diffusion layer between the electrode and mica substrate. Takeshi teaches the use of a TiN layer as a binding layer between glass and a Mo electrode ([0024]-[0032]) but is silent to the use of TiN as a diffusion layer between mica and a smoothing layer (glass paste, as taught by Taiyo: page 1). Taiyo teaches the use of a glass paste smoothing layer on mica but fails to discuss a TiN or TaN layer between the smoothing layer and mica substrate (page 1). Further search revealed Probst (US 5676766) and Fix (US 20040144419). Probst teaches a chalcopyrite solar cell with a TiN binding layer but remains silent to two TiN or TaN layers sandwiching a smoothing layer nor does Probst teach using TiN to bind or prevent diffusion from mica. Fix teaches the use of a TiN diffusion barrier preventing Cu diffusion into the Mo electrode layer from a chalcopyrite solar cell but again fails to teach a sandwich of TiN layers nor diffusion prevention from mica.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
